
Subject: problems with last r14811

Posted by [Dmitry Morozov](#) on Tue, 06 Mar 2012 12:49:50 GMT

[View Forum Message](#) <> [Reply to Message](#)

Hello,

After update to rev 14811 (-weffc++ fix part 2) I could not run the simulation of feb12 tutorial. Here I'm using 64 bit ubuntu 11.10 and previous externals (may11). But this bug is the same on another 64 bit machine running Fedora 16 with jan12 externals.

```
freez@freez:~/fairsoft/pandaroot/trunk/tutorials/feb12$ root run_sim_sttcombi_evtgen.C
```

```

```

After that I tried to rollback to rev14810, the sim macro went ok, but it sigfaulted in digi part:

```
freez@freez:~/fairsoft/pandaroot/trunk/tutorials/feb12$ root run_digi_sttcombi.C
```

```

For immediate solution please do svn update -r whatever also in base.
There has been some bug fixing in FairRunAna that cause crash in some reconstruction code.

About the first crash, this was connected to a "too fast" commit from my side yesterday afternoon. Now it should be fixed.

Stefano,
the first crash is dissapeared, thanks.

The second crash in digi is still there. Here is the output:

```

Root >

This is Fedora 16, 64 bit, jan12 externals.

I guess problem is in:

"Error in <TBufferFile::CheckByteCount>: object of class PndEmc read too many bytes: 309 instead of 305"

Dmitry

Hi,

this is a more complicated problem, and we are still investigating on it.

For the moment, in order to get rid of it, you should modify fts/PndFtsHitProducerReal.cxx:

```
void PndFtsHitProducerRealFast::SetParContainers() {

    FairRuntimeDb* rtdb = FairRunAna::Instance()->GetRuntimeDb();
    std::cout<<"pndgeoftspar: prima"<<std::endl;
    fFtsParameters = (PndGeoFtsPar*) rtdb->getContainer("PndGeoFtsPar");
    std::cout<<"dopo#####"<<std::endl;
}
```

Just comment out the line:

```
// fFtsParameters = (PndGeoFtsPar*) rtdb->getContainer("PndGeoFtsPar");
```

and recompile. This should be enough.

Thanks to Mohammad the problem of the Fts params is fixed. Please update your fts folder.
