Subject: Problem building FairBase libraries with clang

Hello I'm using clang compiler on Mac OS Lion with external packages jan12.
However, when compiling CBMROOT, I've got a compilation error in dbase library.
Can somebody fix this problem? It is mainly due to missing includes and const.

Hello Andrey,

It it corrected now in SVN (15012), it was mainly due to extra includes which make the definition of some variables ambiguous! The GNU compiler does not care about it but this new one seems to be better for these things.

regards,

Mohammad
