Dear software developers,

I keep receiving email from the dashboard for warnings produced by code that is not mine.

Please the relevant expert, look at the following log message and fix the problem. Thanks in advance

Gianluigi

Details on the submission can be found at

<http://cdash.gsi.de/CDash/buildSummary.php?buildid=7334>

Project: PandaRoot

Site: smigrid02.smi.oeaw.ac.at

Build Name: Grid-EL5-linux-x86\_64-gcc4.1.2-fairsoft\_may11

Build Time: 2012-08-07T02:44:47 CEST

Type: Nightly

Errors: 4

Warnings: 500

Tests failing: 22

You receive such mails on tuesday because it is the time when the grid latest is recompiled.  
The crashes come from the fact that latest is still compiled with may11 and not jan12.

Somebody (Johan?) should update latest with jan12. I don't know how to do it.

Hi,

I just removed the dev:latest from the grid sites.... to add and modify dependencies etc via packman is presently difficult, so that I leave up to the next grid workshop. Also be aware that I could not modify the crontabs on the various grid sites, which contain the a call to Dashboard. Cron will therefore now complain on each grid site, but that is not so bad. In any case, the sites will not post to the dashboard anymore...

Greets,

Johan.

correction.... I am actually not sure which sites really removed the package. Packman returns me often with errors on various siteswhile trying to check "packman listInstalled -everywhere".

j.
