Dear all,

I'm running 1000 events using the macro

macro/pid/run_sim_sttcombi_evtgen.C

but I get the following error.

If I re-run the macro, I obtain the same error at different number of events (83, 16, 1 are my first three tentative)

I try to make an svn update, to compile everything, removing the build directory.

I try also to cancel every time the old root file into my directory.

Could you please help me?

Thanks in advance,

Elisa
