Subject: fairbase does not compiile properly as is (10-5-12) [SOLVED]

View Forum Message <> Reply to Message

Hey,
I tried a fresh new install of fairbase on my Ubuntu 12.04 64 bit. My external packages sep12
compiled without a hitch. I then tried to compile

svn co https://subversion.gsi.de/fairroot/fairbase/release fairroot
mkdir build
cd build
export SIMPATH=path to/sep12-build
cmake ..
make

The errors that I get are contained in the file makeAsIs.txt.

To have the command make work, I had to comment out add_subdirectory(datamatch) and
add_subdirectory(test).

Did anyone else using Ubuntu 12.04 get fairbase to compile without having to modify it? I'm
wondering whether the package is buggy or if I'm doing something wrong. I'm also wondering if
all my troubles right now are caused by me not compiling these two directories.

Also, has anyone had any luck using geant4 with the current fairbase?

I tried running the rutherford example,
cd fairbase/examples/rutherford/macros
root run_rutherford.C
And it seemed to run without a hitch.

However, run_rutherford as it is in the repository uses Geant3. I want to use Geant4, so I
replace run->SetName("TGeant3"); with   run->SetName("TGeant4");
After I try to run_rutherford.C again, I get a segmentation fault. The error is described in
geant4SeFault.txt. I naively copied g4libs.C from sep12/transport/geant4_vmc into my
sep12-build/share/root/macros and into my gconfig folder in my fairbase. Note: the g4libs.C
was not found at all in my sep12 build folder, which might suggest that sep12 is faulty in this
aspect. After copying g4libs.C into said folders, I ran rutherford again and obtained the error
described in geant4now.txt. I don't know what else to try, so any help is greatly appreciated.

Thank you in advance

Hi Guys

I am also having the same problem regarding Geant4 and the fairdatamatch libraries.

Since i was using the Jan10 release for a while i though that geant4 needed CLHEP to work, but you guys say in your current release it is integrated with Geant4.

As always any help is much appreciated.

Cheers
Raghav

Hi Raphael,

sorry for the late response. Both issues are fixed in the latest version of fairbase. So please update your local working copy and try again.

Ciao

Florian

Hi Florian

Thanks for your reply. I did the update and it looks like there are no problems regarding FairDataMatch.

But the geant4 is still not working.

There are different errors regarding where i place the g4libs.C file (do we need it actually here?). I remember that there was this same problem before and I solved it by pasting that file in some place where fairroot was looking for it. (

https://forum.gsi.de/index.php?t=tree&th=3614&start=0&rid=17
88&S=2ec8d4daab8502a0c37cbf69f69a6a02#page_top)

So it still gives me the following error regarding Geant4
-I- FairGeoMedia Read media
[INFO   ] [08.10.2012 11:50:50] [FairRunSim.cxx::Init:165] Create visualisation manager

Hi Florian,
Thank you for fixing issues regarding cmake. However, like Raghav, I am still having problems running Geant4 with the rutherford example. I get the exact same errors that I described in my second post. Has anyone else besides Raghav and myself ran into any issues running geant4? Has anyone come up with a solution?

Again, thank you Florian for your response.

-Raphael

Hi Raphael,

the problem with Geant4 is fixed now, so please update your local working copy and try again.

If the problem is solved for you please add the string [SOLVED] to the topics of the two threads.

Ciao

Florian

Hi Raphael,

I meant changing the title of the first message of this thread, which I did now. This is the topic which is shown in the list of all topics. Changing this after the topic is solved helps keeping track of problems.

Ciao

Florian
