

Hi,

I am trying to install pandaroot in Mac OS X 10.7.5

It did following steps in order to install pandaroot.

1. First I fetch the sep12 via svn and put it in:

```
/Users/himani/PANDA/sep12  
and configure it and giving path to install :
```

```
/Users/himani/PANDA/INSTALL/
```

and this compiled without any error.

2. Then I fetch pandaroot in the dir.

/Users/himani/PANDA/INSTALL and in this INSTALL dir now I have following sub dirs:

```
bin/   etc/   include/ lib/   share/ trunk/
```

I set the SIMPATH = /Users/himani/PANDA/INSTALL/

3. Then I did

```
cd trunk  
mkdir buildpanda  
cd buildpanda  
cmake ../
```

it shows at the end:

```
Found TEve, so the eventdisplay will be compiled.  
-- <MVA_INFO> Building MVA with multiClass.  
-- Configuring done  
-- Generating done  
-- Build files have been written to: /Users/himani/PANDA/INSTALL/trunk/buildpanda
```

and then I did make which is giving following error:

```
[ 20%] Building CXX object generators/CMakeFiles/Gen.dir/G__GenDict.cxx.o

Hi,
was it fixed or the problem is still existing?

Hi,

No its still present. I reinstalled the Xcode and trying to install panda software again but getting same problem. I am attaching the log file after installing the external packages, sep12. Please have a look if you get some idea? It is trying to search libX11 files for 32 bit I think. I dont know may be that is the problem.

I forwarded this message to Florian and Mohammad, who are our Mac experts. I cannot help for this, sorry.

Hi,
I have tried to install pandaroot on a MacBookPro with the same Lion version, and in my case it worked.
I have installed xcode, I have installed the Command Line Tools through Xcode, and also fortran from this link suggested by Mohammad, and nothing else.
Is it possible that you have a wrong version of fortran, maybe a 32bit version?
And I have installed also MacPorts. If I remember well this was done after my installation, but just to be sure you could try to install it.

Hi Stefano,

Thanks.

Somehow pandaroot is installed in my macbook, but now I am getting some different error while running macro sim_complet.C in that. In Suse system I am able to run these examples but in macbook it is giving following error:

```
Himani-MacBook-Pro:run himani$ root -l sim_complete.C
root [0]
Processing sim_complete.C...
Warning in <TClassTable::Add>: class PndSdsTask already in TClassTable
Warning in <TClassTable::Add>: class PndSdsMCPoint already in TClassTable
Warning in <TClassTable::Add>: class PndSdsDigi already in TClassTable
```

```

Warning in <TClassTable::Add>: class PndSdsStrip already in TClassTable
Warning in <TClassTable::Add>: class PndSdsDetector already in TClassTable
FairRootManager::OpenOutFile("sim_complete.root")
[INFO ] Media file used : /Users/himani/PANDA/pandaroot/geometry/media_pnd.geo

allocated
*** set a breakpoint in malloc_error_break to debug
Himanis-MacBook-Pro:run himani$

```

I have removed previously installed root and path declared in bashrc as I defined in SuSe system previously.

I also checked gfortran version and it is for 64bit:

```

Himanis-MacBook-Pro:run himani$ gfortran --version
GNU Fortran (GCC) 4.6.3
Copyright (C) 2011 Free Software Foundation, Inc.

```

and gcc version

```

Himanis-MacBook-Pro:run himani$ gcc --version
i686-apple-darwin11-llvm-gcc-4.2 (GCC) 4.2.1 (Based on Apple Inc. build 5658) (LLVM build
2336.9.00)
Copyright (C) 2007 Free Software Foundation, Inc.

```

Hi,

Unfortunately this is a known problem of EvtGenDirect and Mac, while the box generator and Dpm work nicely.

I asked already Mohammad to take care, we will let you know once it will be fixed.

The EvtGenDirect problem for MAC now is fixed.
