Subject: how to correct load all avaliable systems in simulation? Posted by Anastasia Karavdina on Thu, 20 Dec 2012 14:55:41 GMT

Hi all!

I'm checking possible background issues for the luminosity monitor from secondary particles. I think here is important include all material before our system (f.e forward tracking system) So far I did simulation with Imd+beam\_pipe & magnets only and didn't include others system in my simulation macro.

So my question, does exist any kind of example macro where all system are included with correct file names and so on?

As a first guess I took

pandaroot/trunk/macro/mvd/TimeOrderedSim/run\_sim\_sttcombi\_dpm.C but not sure will it be enough or not.

Best regards, Anastasia.

Hi,

the standard macros are in macro/run.

Oh, didn't notice this path before

Thank you, Stefano, for extremely fast reply!

Cheers, Anastasia
