[View Forum Message](#) <> [Reply to Message](#)

Hi,

I have successfully installed pandaroot in Suse 11.1 system.

As a beginning I start to look macros in /pandaroot/macro/run/ dir.

but while running root -l sim_complete.C, it is giving following error:

root [0]

Processing sim_complete.C...

Error: Symbol FairRunSim is not defined in current scope sim_complete.C:33:

Error: Symbol FairRunSim is not defined in current scope sim_complete.C:33:

Error: type FairRunSim not defined

FILE:/home/bhatt/PANDA/pandaroot/macro/run/./sim_complete.C LINE:33

Warning: Automatic variable FairRunSim*fRun is allocated sim_complete.C:33:

Error: Undeclared variable FairRunSim*fRun sim_complete.C:33:

*** Interpreter error recovered ***

I tried other macro as well but getting similar error.

Is there anything else I need to do in order to run this macros.

Regards,

Himani

Did you run the config.sh before?

[View Forum Message](#) <> [Reply to Message](#)

Yes I did this in buildpanda dir itself.

Which version of the code you are using?

And can you put here your config.sh? It seems you are not properly loading the environment variables.

Ok,

can you copy here what is printing after you execute the config.sh, and what is appearing after you run the macro? it seems that you cut some part of the log message.

While giving ./config.sh command it shows:

```
System during compilation: Welcome to openSUSE 11.1 - Kernel r ( l).
                           x86_64
System now                  : Welcome to openSUSE 11.1 - Kernel r ( l).
                           x86_64
```

and when I run the code it gives:

```
bhatt@ikp398:~/PANDA/pandaroot/macro/run> root -l sim_complete.C
```

```
root [0]
Processing sim_complete.C...
Error: Symbol FairRunSim is not defined in current scope sim_complete.C:33:
Error: Symbol FairRunSim is not defined in current scope sim_complete.C:33:
Error: type FairRunSim not defined
FILE:/home/bhatt/PANDA/pandaroot/macro/run/./sim_complete.C LINE:33
Warning: Automatic variable FairRunSim*fRun is allocated sim_complete.C:33:
Error: Undeclared variable FairRunSim*fRun sim_complete.C:33:
*** Interpreter error recovered ***
root [1]
```

One thing I found when I give source check_system.sh in buildpanda dir myself, it is giving such statement:

```
bhatt@ikp398:~/PANDA/pandaroot/buildpanda> source check_system.sh
System during compilation:
```

```
System now      : Welcome to openSUSE 11.1 - Kernel r ( l).
                  x86_64
```

```
You try to run the software on a different
linux flavour than it was compiled on.
This is normaly a serious error, so we stop
the execution at this point.
If you know what you do you can change the
config.sh script to bypass this security issue.

It seems that the following lines are not executed:

```
gROOT->LoadMacro("$VMCWORKDIR/gconfig/rootlogon.C");
rootlogon();
```

Have you modified your sim_complete.C?

Can you execute these lines from your root shell?

```
gROOT->LoadMacro("$VMCWORKDIR/gconfig/rootlogon.C");
rootlogon();
```

[View Forum Message](#) <> [Reply to Message](#)

Yes I tried it. I don't know whether it should show some additional messages but in my case when I execute this command it is like this:

```
bhatt@ikp398:~/PANDA/pandaroot/macro/run> root -l
root [0] gROOT->LoadMacro("$VMCWORKDIR/gconfig/rootlogon.C");
root [1] rootlogon();
root [2]
```

It is not working. Can you check if \$VMCWORKDIR is set?

My bashrc looks like:

```
export ROOTSYS="$HOME/PANDA/sep12/tools/root/"
export SIMPATH=$HOME/PANDA/INSTALL/
export VMCWORKDIR=$HOME/PANDA/pandaroot
export PATH=$PATH:$SIMPATH/bin
export LD_LIBRARY_PATH=$LD_LIBRARY_PATH:$SIMPATH/lib:$SIMPATH/lib/root
```

You don't have to set such variables in the .bashrc, they could conflict.

The environment is set after you launch the:

```
./config.sh
```

Can you remove such voices in your bash rc, open a new terminal, launch the config, do:

```
echo $VMCWORKDIR
```

```
ls $VMCWORKDIR/gconfig/rootlogon.C
```

and put here the output? Probably you screwed such variables.

[View Forum Message](#) <> [Reply to Message](#)

Now its working. I removed the stuffs from the bashrc and execute: `./config.sh`. Before I was executing with wrong command: `./config.sh`

Thanks a lot.
