---

dear analyzers,  
I made available in svn to everybody the newest version of the central tracker (Stt+Mvd)  
Pattern Recognition with all the improvements up to date.

This code should be faster and with similar efficiencies-contaminations as usual.

In order to do that you have simply to replace the Pattern Recognition class

PndTrkTracking

with

PndTrkTracking2

The constructors are exactly the same; please see an instance in  
the latest version of :

pandaroot/macro/qa/att/QAmacro\_stt\_3.C

Please report to me any problems etc.

Thanks!      Gianluigi

I have modified the default macros in macro/run, which are now using PndTracking2.
