Subject: [FIXED] Bug with parameters set to '0.' in Fast Sim

Hi all,

thanks to Donghee reporting it, I just fixed some issue in PndFsmAbsDetector.cxx with parameters set to '0.' in Fast Sim. For some reason I don't remember, parameters with value set to 0 were only accepted as '0' or '0.0', but not as '0.' or something equivalent.

I added now explicitly the acceptance as '0.', so please update fsim and/or stick to one of the two versions given above for the time being, until I find a more general fix after my vacations.

Best and have a nice easter,
Klaus

Hi all,

Now forward direction seems to be perfectly OK in the fast simulation.
Below two theta plots are tested with box generator for pion with 0.1<p<5GeV. (using super ideal detector.)

Thank you for fixing
Best,
Donghee
