Dear all,

since we lately had some disc space issues on hera, I modified the default behaviour of the scripts

trunk/macro/prod/job\_prod.sge  
trunk/macro/prod/job\_prod\_pgun.sge

in the way that only the \*\_pid.root and \*\_par.root files are copied back from the nodes to your hera directory to save disc space. For most analyses this should be reasonable. In case you want to copy all stages (sim, dig, rec, pid, par), you need to add the keyword 'saveall' as last parameter in job submission. Take a look to the updated trunk/macro/prod/README for examples.

Best,  
Klaus
