Hi,

I just tried to run Ftf with pandaroot trunk 27083, external packages jul14p3. I use the line

```
PndFtfDirect *Ftf = new PndFtfDirect("anti_proton", "G4_H", 1, "ftfp", Mom, 123456);
```

in my macro and get at runtime the error

```

Any idea what's going wrong?

Best,
Klaus

Does it work with apr13? Maybe geant4 had some installation problem at GSI? Unfortunately I cannot check in a short time.

Hi,

I think it failed with apr13, which triggered me to do this whole update trunk, FairRoot and externals issues...

Best,
Klaus

Is it working now, after the recent updates?

Hi Stefano,

I tried now to run the standard macro/run/sim_complete.C with FTF enable, (i.e. full sim setup), but I still get exactly the same error. Revision info is:

Did you try the standalone version?

Hello,

There was a bug during initializing variables at a constructor. It is fixed and things are running again at my machines.

Ralf

Hi,

thanks, now it works!

Best,
Klaus
