## Subject: [Fixed] PndMvdStripHitProducer undeclared function Posted by Stefan Pflueger on Mon, 01 Jun 2015 09:31:42 GMT

View Forum Message <> Reply to Message

Hello,

I just got an undefined reference when linking to the libMvd, and the following member function is not implemented.

/\*\* Specify the branch & folder names for the I/O \*\*/
void SetBranchNames(TString inBranchname, TString outBranchname, TString folderName);

Since we mostly have macros that use the shared libraries, these errors usually do not appear unless you link to that library from somewhere else. Maybe we can turn on -WI,--no-undefined to avoid these kind of errors...

Cheers,

Stefan

I see that the current version still does not have this fixed? Could someone please add the following lines to the PndMvdStripHitProducer.cxx, since I do not have any write permissions in that directory .

```
void PndMvdStripHitProducer::SetBranchNames(TString inBranchname, TString
outBranchname, TString folderName) {
  flnBranchName = inBranchname;
  fOutBranchName = outBranchname;
  fFolderName = folderName;
  SetInBranchId();
}
```
