Subject: [FIXED] problems when running jobs at prometheus
Posted by Elisabetta Prencipe (2) on Tue, 17 Nov 2015 10:17:39 GMT

Dear all,

 since 5 days I experience this problem, when running my analysis macro over my pid/par files:

****

[INFO   ] The number of entries in chain is 15000

Macro finished successfully.
Real time 8.322 s, CPU time 3.9 s

 Test passed
 All ok
***

****

No output is built, but no error. Until last Thursday, everything had worked smoothly. Does anybody know what happens since 5 days, at gsi/prometheus? is it a problem of quota, again?

Thanks for your feedback, Elisabetta

Hi Elisabetta,

It seems your storage space is full. I saw the same problem this morning and it was solved by deleting some old and useless files.
Hope this clue works for you.

Best regards,
Lu
