Dear all,

I am doing some tests in a new trunk, rev-28737. In testing reconstruction with genfit2, I see very often the message:

>>> PndEmcHitProducer::Exec Skipping Module 10 (FscFiber)

When I had tested genfit2 with rel-oct14, this message never showed, as well as I remember. Can anybody explain to me what it is referred to?

thanks in advance, Elisabetta

This is a warning.

Sure, it is warning.

If you consider it is normal, fine. One warning more to the list...

cheers, Elisabetta
