---

As nicely stressed by Paul Buehler in his plenary talk at the Collaboration Meeting at GSI in September 2015:

(P. Buehler) Review of Data Production Systems

and stressed again by me in one slide at the Collaboration Meeting in Vienna in December 2015, and several time in previous meetings,

an efficient usage of all the computing resources we have goes through a centralized data production.

If you plan to run a big amount of data, such as background events, please contact the:

- Production Manager Paul Bühler
- Computing Coordinator Stefano Spataro

Together we will define the procedure and perform the production of data set.

A list of available data sets is updated in wiki:
