---

Hello everyone,

I'm trying to compile FAIRSOFT master in OSX 10.11.4 (15E65) with XCode 7.3 (7D175).  
After some problems, I tried a fresh installation with  
compiler=Clang  
debug=no  
optimize=no  
geant4\_download\_install\_data\_automatic=yes  
geant4\_install\_data\_from\_dir=no  
build\_root6=yes  
build\_python=no  
install\_sim=yes

The installation stops systematically since last Friday:

```
*** Downloading pythia6 sources ***
% Total    % Received % Xferd Average Speed   Time    Time     Time  Current
           Dload  Upload   Total   Spent    Left    Speed
  0   0   0   0   0   0   0   0  --:--:--  0:01:14 --:--:--    0curl: (7) Failed to connect to
root.cern.ch port 21: Operation timed out
*** Unpacking pythia6.tar.gz .....
--E-- Cannot unpack package pythia6
```

Do you have any hint about this problem?

Best regards and thank you for the support

Héctor

Hello Héctor,

The location of pythia6.tar.gz file has changed. The fix is already committed by Florian. Please  
do update of your master branch with "git pull".  
There is also new patch 4 for nov15 release.  
The same changes in dev will appear shortly.

Best regards,  
Dima

Hi,

thanks, the master is working now (OSX 10.11.4 (15E65) with XCode 7.3 (7D175) using ROOT6), with the modification:

-Dvc=OFF

in tools/rootconfig.sh

Best regards and thank you for the support.

Héctor
