Subject: New (almost) version of SciTil geometry and real digitization
Posted by StefanoSpataro on Fri, 20 May 2016 14:36:48 GMT

Dear all,
I have modified the macro/run sim_complete.C and digi_complete.C so that now the
SciTil_201601 geometry of SciTil is used by default, and that real SciTil digitization is used
instead of the ideal one.
I have modified also the master classes, so that if you use the "master" style (macro/master, or
macro/qa/run3/ run4/ dpm3/ dpm4/ ftf3/) you need to update the trunk, recompile, and you will
use the latest version of the geometry automatically.
The suggested version of pandaroot trunk, including this version of the standard macros, is
now 29111 (the wiki page has been updated).
