I did not modify anything and wanted to see how the simulation works.
Run `root -l r3bsim.C` at `macros/r3b/actar`
10 electron tracks are generated.
`root -l eventDisplay.C`
shows the geometry but not the tracks.

Any special setting to see them?

Regards, oleg.

It is described here:

<https://www.r3broot.gsi.de/event-display>

Best regards,
Dima

This I saw and did.

I found the problem - the electron beam momentum was set much too low $1e-6/0.8$
The electrons were under the cut probably.

Oleg.
