Dear all,

the new suggested versions of the code for developments are:

FairSoft may16p1

FairRoot v-16.06

PandaRoot trunk 29475

In the latest trunk the standard dirc geometry in master macros has been slightly updated, dirc\_e3\_b3\_l6\_m40.root.

Without a feedback from the user side, in particular for the day1 setup, we cannot create a new release for analysis. Be aware.

Hi,

please use FairSoft may16p1.

The download location of the gtest package has changed which will result in an error when using may16. The issue is fixed in may16p1.

Ciao

Florian
