Hi,

I want to use event display in root6 but it does not seem to work.
I am using fairSoft version may16p1, fairRoot version 16.06b and pandaRoot trunk version 30007.
The problem is that the class FairMCTracks does not seem to be recognized.
Does somebody know what the problem might be?

Best,
Jenny

Dear Jenny,

could you send the error message you get in your terminal screen.

Cheers,

Tobias

Hi,

when I try it now it seems to work,
I probably just made some mistake running it earlier
and the FairMCTracks and FairMCPointDraw classes
do not appear to be recognized correctly in Eclipse
so I thought this might be the problem, however this
probably just have to do with my settings.

Best,
Jenny
