Hi, all,

These days I try to install PandaRoot release feb17 on Kronos, with the FairSoft may16_root5 & FairRoot v-16.06b_fairsoft-may16_root5 installed under /cvmfs/fairroot.gsi.de/

I find I can't install PandaRoot successfully. The error is simply I can't do the "make" command.

Then I try to install FairSoft by myself, and I also fails with the following error. Does anyone can help?

```
**** Checking libraries in /u/zliu/nyx/fairsoft_may16_root5/buildFairSoft/lib ****
*** Geant3 compiled successfully ***
*** Downloading vgm sources with subversion***
svn: E000111: Unable to connect to a repository at URL
'http://svn.code.sf.net/p/vgm/code/tags/v4-3'
svn: E000111: Error running context: Connection refused
*** Compiling VGM .....
scripts/install_vgm.sh: line 29: cd: /u/zliu/nyx/fairsoft_may16_root5/transport/vgm: No such file
or directory
CMake Error: The source directory "/u/zliu/nyx/fairsoft_may16_root5/transport" does not
appear to contain CMakeLists.txt.
Specify --help for usage, or press the help button on the CMake GUI.
make: *** No rule to make target 'install'. Stop.
*** ERROR: VGM could not be created.
**** Checking libraries in /u/zliu/nyx/fairsoft_may16_root5/buildFairSoft/lib ****
*** End installation of external packages with Errors***
```

The problem is that sourceforge is down. Therefore the sever to get vgm (and others) is not reachable.
Unfortunately we cannot do anything against it.

Cheers,

Tobias
