Subject: Eclipse IDE installation
Posted by Christopher Huhn on Tue, 01 Aug 2006 17:44:31 GMT

Hi all,

I just created a central installation of eclipse 3.2 beneath /usr/local/eclipse/eclipse-3.2.
By now all I did was mainly extracting the downloaded tarball
(http://www.eclipse.org/downloads/). Please test.

I started this thread mainly to start a BOF about a GSI eclipse installation and invite everybody
to contribute his ideas about the appropriate configuration and useful plugins (e. g. the C++
Plugin CDT).

Regards,
  Christo

It would be nice to have these plugins available:

CDT: http://eclipse-plugins.info/eclipse/plugin_details.jsp?id=183

EPIC: http://eclipse-plugins.info/eclipse/plugin_details.jsp?id=281

Cheers,

Simon
