Hi everybody.

I have installed Momo but it does not work. I can create geometry, physics and materials but when i compile my project there is always an error. I don't know why. Could you please help me?

Thank you very much.

For more information: when i compile the following message appears:

>>> Error output, if any

make: Momomake.gmk: Aucun fichier ou répertoire de ce type

make:***pas de règle pour fabriquer la cible "Momomake.gmk". Arrêt.

>>>End of Error output

Hi adam,

Just for information: This forum is NOT about Geant 4 (G4), but is dedicated to the GSI Object Oriented Online Offline (GO4) framework (see <http://go4.gsi.de> to find out what that is...).

So it might be better to put your request into the Geant4 Simulation forum, since there are more people which can possibly help you.

Best regards,

Joern Adamczewski
