Subject: Release of GEANE (Fortran code)

Hello,
this message is to inform you that we have released to CERN the updated version of GEANE (Fortran code) and that the routines are now available through the VMC cvs repository.

The link to the cvs viewer is: http://root.cern.ch/viewcvs/?cvsroot=GEANT3

To use them it is necessary to update the transport/geant3 directory in your cbmsoft tree: in this directory you will also find a new README file that summarizes all the changes to the code. I also attach this README to this message.

It is already possible to use them, but perhaps it is better to wait for the new C++ interface before trying them...
In any case, let let us know in case of problems or suggestions.

Best regards,
Andrea

Hi!

The link to the cern GEANT3 repository does not work for me! I get a python error when I try to open it.

And how do I do the update of the GEANT3 directory?

Thanks!
Sebastian.

Ok, done. I had to login to cvs.

See here: geant3 cern cvs

Sebastian.
