Hi!

user friese has committed revision 987 of the tpc directory where some important classes are commented out from the linkDef. This was done apparently because these classes did not build with cmake.

Please, if you have problems make a quick fix and send me a bug report, so I can take care of this. But do not commit files where important classes are commented out without notice!

I am aware that I am not supporting cmake adequately at the moment. I will change this. promised.

CU!

Sebastian.

Sorry for the previous post. It was probably b\*\*\*t.

I am confused what is going on.

Sebastian.

Hi!

I have fixed the broken CMakeFiles.

I will continue working with cmake now. That means, that automake/autoconf will be phased out in the tpc directory.

Cheers! Sebastian.
