
Subject: genfit & recotasks library loading order

Hi all.

I noticed that using the packages genfit and recotas requires a special order to be loaded in the root macro:

```
gSystem->Load("libgenfit");
```

```
gSystem->Load("libtpc");
```

```
gSystem->Load("libtpcreco");
```

```
gSystem->Load("librecotasks");
```

This is because the recotasks depend on the TpcPlanarRecoHit (and not vice versa).

Greetings from Dresden, Ralf.
