Dear all,

after some tests with Lia, I have committed the stt code with the minimum changes to comply with the "Pnd" coding convention.

All the classes now begin with "Pnd", the macros have been corrected too.

Let me know if anybody sees any error during compilation/execution.

I'll put in the Wiki some documentation so that for each class there is some short description...

For (semi)-automatic translation, I made use of linux "awk" command with some options.

Best regards, Pablo
