Subject: svn and our policies
Posted by Ralf Kliemt on Tue, 05 Feb 2008 15:39:04 GMT

Hi all,

I read through one svn manual and stumbled over the copy mechanism to create your own branch. What came to my mind is to make a development branch for the mvd to have the synchronization to Tobias but no interference with the trunk of pandaroot. Since soon there will be some new geometry file I thought to apply the changes on that branch first before screwing the simulation for the others.
My question is now: Am I "allowed" to just make that branch myself (technically I have the writing rights on the mvd part)? Does someone have a supervising/steering role on the branches to keep the svn clean?

Kind regards from Dresden

- Ralf
