Hi all,

There will be a Pandaroot Computing Workshop in Dresden.

The tentative date was May 20th-23rd.
Unfortunately there is a Promotion at KVI in the week before and a Kolloqium on the 20th.

I therefore propose May the 27th (Tu) to 30th (Fr).

Kind regards, Ralf.

Hi all,

there might be actually an alternative to a workshop for a whole week, namely a tutorial session (maybe 1/2 day, maybe 1 day) at the next collaboration meeting in Krakow June 23-27 (it was actually Ralf's idea when we just talked on the phone, but I would support it). What does everyone think? We can discuss it on the next meeting on Wednesday.

Soeren

Hi,

Just reading the forum news. My excuses, for making life so difficult (too many events occuring at the same time... maybe I should really start using an agenda). My apologies to Ralf and Soeren!

As I discussed with Ralf via Skype.... in principle, I dont have any objections in allocating a day during the next CM for a tutorial session. I would also not mind to visit Dresden for a couple of days (always nice to get an update of the developments concerning the Frauenkirche). But seriously, there should be enough beef for a tutorial... so lets hear the others,

Best wishes,

Johan.
