

I wanted to track from tpc to the Emc to catch the Emc Cluster Corresponding to the track using GeaneExEmc Johan's Example in tutorial.

I am getting following Error from CbmGeanePro

```
-I- PndTpcLheHitsMaker::Init: No EMC detector is used
-I- PndTpcLheHitsMaker::Init: Using MCTrack
-I- PndTpcLheTrackFitter1::Init: TpcPoint array! Switching simulation ON
-E- CbmRootManager Branch: PndMvdMCPoint not found in Tree
-E- CbmRootManager Branch: EmcCluster not found in Tree
```

```
Program received signal SIGSEGV, Segmentation fault.
[Switching to Thread 0xb70f26c0 (LWP 8812)]
0xb4c604b5 in CbmGeanePro (this=0x955ad30)
    at /home/vanni/fairsoft/pandaroot/geane/CbmGeanePro.cxx:37
37  afErtrio=gMC3->fErtrio;
Current language: auto; currently c++
```

I have followed Ralf and Andrea's suggestion to Change the CMakelist.txt

Add

```
* ${GEANT3_INCLUDE_DIR}
```

and starting a CbmGeane in my macro,

It was working fine.

now I want to Combine it with Emc Reconstruction part
hitProducer, Digitalisation, Make Cluster so on....

now I get the following Error in the Initialization

```
*****
initialisation for run id 1133892975
*****
-I- PndMvdDetector: fListOfSensitives contains:
Disk-Sensor
Barrel-Sensor
StripSensor
SensorActiveArea
StripActive

2744     delete ((::PndGeoEmcPar*)p);
2745 }
2746 static void deleteArray_PndGeoEmcPar(void *p) {
2747     delete [] ((::PndGeoEmcPar*)p);
2748 }
(gdb) continue
Continuing.
```

```
*** Break *** segmentation violation
Attaching to program: /proc/10471/exe, process 10471
ptrace: Operation not permitted.
/home/vanni/pidmacro/10471: No such file or directory.
error detected on stdin
```

It is not clear, if the Problem is in the Emc or in the Geane, as both of them are working nicely individually.

Cheers,
Vanni

It seems there are no EmcCluster in your input root file.
Are you sure everything is working properly at that stage?

I do not include EmcCluster for the LheTrackFinding and LheTrackFitting, I include only Mvd Points and TpcPoints,
From the last point in the track, I switch off the Emc part in the LheHitsMaker

I do the Geane Propagation to Emc volume. So, I have the Geane guess of where the cluster is going to be for that track.

now I want to do the position-position matching to the Geane guess with the reconstructed clusters in Emc.

unfortunately Emc reconstruction and Geane Propagation don't work together.

What I meant is the reason of the missing EmcCluster:

- E- CbmRootManager Branch: PndMvdMCPoint not found in Tree
- E- CbmRootManager Branch: EmcCluster not found in Tree

Don't you use emc cluster info in your code?

```
PndTpcLheHitsMaker* trackMS = new PndTpcLheHitsMaker("Tracking routine");
//trackMS->SetSimulation(kFALSE);
//trackMS->SetVerbose(kTRUE);
trackMS->SetTpcMode(1, -1); // 0 OFF, 1 TpcPoint, 2 TpcCluster // TpcPoint smearing [cm], if
negative no smearing
trackMS->SetMvdMode(1, -1); // 0 OFF, 1 MVDPoint, 2 MVDHit // MVDPoint smearing [cm],
if negative no smearing
trackMS->SetEmcMode(0); // 0 OFF, 2 EmcCluster, 3 EmcBump
fRun->AddTask(trackMS);
```

I have switched off the MvdMode and EmcMode in my Macro....
I don't know why does it look for the cluster..!

and I have Mvdpoints In the input file hits maker do use MvdPoints for tracking.

In your macro something is trying to access to EmcCluster, and this is not the LheHitsmaker.
What else?

Oh that was from another irrelevant task I have made. I have switched it off... still the problem persist...my problem is nothing to do with that task..

Hi,

Of the two error messages:

-E- CbmRootManager Branch: PndMvdMCPoint not found in Tree

-E- CbmRootManager Branch: EmcCluster not found in Tree

after a fast glimpse I think that the first comes from the wrong name of the array (the array is called MVDPoint)

Unfortunately I have no idea why EmcCluster is not found.

cheers,
ola
