Hi,

After making the release jun08 it was my chance to put some changes that could be not 100% stable! So the event display has been updated also there was some changes in base and geane to make the following possible:

1. The scene is not reseted when reading a new event
2. detector points are three dimensional now
3. shape and color of the points can be set from the macro
4. Geane tracks can be visualized (with geant3 r227)
5. Geometry can be read from a friend file if its not in the input file
6. Tasks that try to activate non-existing branches will be deactivated

examples are eventdisplay.C macros in macro/run and tutorials/geane/GeaneExEmc/macro/

regards

Mohammad
