Dear all,

as discussed on yesterday's PandaRoot EVO meeting,
we are thinking about having a tutorial, given by Stefano,
in Ferrara on Monday morning.

The subject would be:
use of lhetrack for all detectors (mvd,tpc,stt,emc,drc,tof,muo)
and how to get PID information from this
(e.g. dE, E/p, thetaC, beta)

However, maybe many people are travelling.

A poll is added. Please take a moment to mark "yes" or "no".

Stefano and Soeren
