Hi Soeren concerning the frase

1. primary particle which has no daughter particle
2. unknown pdg code (for any newly defined particles such as Alicia's hypernuclei, so that they can decay in geant)

it is not true that the particle i define as hypernuclei are unknown for geant indeed their pdg code is known for geant because i define them to be tracked.

The problem with the unknown is related actually with the method pushTrack in MCStack. because there when you add particles or secondaries to one track during the tracking, one has to include the kind of process it is, for example kAbsortion, or kPrimary.

In my case it is not defined any special process for hypernuclei production. nad i can use any of them . (Actually i'm using kAbsortion or KDeacy)

best regards

ALicia.
