
Subject: cmake error in pandaroot installation

Posted by [Annalisa Cecchi](#) on Thu, 09 Oct 2008 11:23:45 GMT

[View Forum Message](#) <> [Reply to Message](#)

Dear all,

I'm installing PANDAROOT in a Scientific Linux machine.

The external packages installation is ok.

When I do:

```
cmake ../pandaroot/trunk
```

I obtain the output below. Obviously if then I do make install doesn't work.

Does someone have some ideas about that?

Thank you in advance for your reply,

Annalisa

Hi Annalisa

Which version of cmake do you use?
cmake --version give you the version.
Which version of PandaRoot do you use?

Ciao

Florian

Hi Florian,

```
> cmake --version  
cmake version 2.6-patch 0
```

for pandaroot I downloaded the trunk with "svn co...."

Why?

Hi agian,
just to try to help you: I have a Scientific linux 5.2, and gcc version: gcc (GCC) 4.1.2 20071124
(Red Hat 4.1.2-42)

Thanks a lot

Annalisa

Hi Annalisa

Thanks for the information, but i have no SL system to check. I did a fast check
on Mac OS and i don't see the problem.

Did you use the cmake binary which was installed with the external packages or is there a cmake in Scientific Linux?

Ciao

Floria

Hi Annalisa

I did some changes in WriteConfigFile.cmake. Please copy the attached file to the cmake/modules subdirectory.
To test the changes please start with a clean build directory. I hope the change helps to solve the problem.
Please let me know if it works, because then i will commit the changes to the repository.

Ciao

Florian

Great!
Now I have pandaroot installed!
I have a compilation error when compiling event display.. but this an other story...

Thank you very much, Florian, for your help,

I also get part of the error message. The part that it doesnt find the Rule Checker. I tried the fix posted by you and it had no effect. I have the external packages installed(july08 version). CMake is installed from the package system of ubuntu. Panda-version is the trunk-version downloaded with subversion.

Note: I have in spite of the error also tried to compile pandaroot, which results in compile errors. I will post them after the cmake output.

Here comes the cmake output:

```
sverre@sverre-laptop:~/pandaroot/buildPanda$ cmake ../trunk

CMake Warning (dev) at pgenerators/DpmEvtGen/CMakeLists.txt:44 (add_executable):
```

Policy CMP0003 should be set before this line. Add code such as

```
if(COMMAND cmake_policy)
  cmake_policy(SET CMP0003 NEW)
endif(COMMAND cmake_policy)
```

as early as possible but after the most recent call to `cmake_minimum_required` or `cmake_policy(VERSION)`. This warning appears because target "DpmEvtGen_exe" links to some libraries for which the linker must search:

EG

and other libraries with known full path:

`/home/sverre/pandaroot/buildPanda/lib/libDpmEvtGen.so.0.0.0`

CMake is adding directories in the second list to the linker search path in case they are needed to find libraries from the first list (for backwards compatibility with CMake 2.4). Set policy CMP0003 to OLD or NEW to enable or disable this behavior explicitly. Run "`cmake --help-policy CMP0003`" for more information.

This warning is for project developers. Use `-Wno-dev` to suppress it.

Hi

The RuleChecker cannot be found, because it is only installed at GSI, but this is no error. The error comes below. I assume that you're using cmake 2.6.? . If this is correct the solution should be to do an update from the repository or if you don't like a complete update, please update at least pgenerators/DpmEvtGen/CMakeLists.txt. I forgot to commit the file yesterday. Hope it works now.

Ciao

Florian

Hi

I updated my repository and the file mentionet got updated. I deleted my build-directory and remade it. I ran "cmake ../trunk" again with the same output. And when compiling i get the same error messages as far as i can see.

Cmake version is:
cmake -help gives this output:
cmake version 2.6-patch 0
This is the cmake-verison in the ubuntu repository.

Hope there is a solution for this.

Regards
Sverre

Hi

Can you change in pgenerators/DpmEvtGen/CMakeListst.txt the part
cmake_policy(SET CMP0003 OLD) from OLD to new and try again.

Ciao

Florian

Subject: Re: cmake error in pandaroot installation
Posted by [Sverre Dørheim](#) on Tue, 11 Nov 2008 15:40:23 GMT
[View Forum Message](#) <> [Reply to Message](#)

I did this with a clean build directory. Ran cmake and make again. With the same errors.

Hope you have some more things I can try out.

summary of my current packages and changed things

cmake version 2.6-patch 2(updated from patch 2)
gcc version 4.3.2(the same)
pandaroot/trunk/pgenerators/DpmEvtGen/CMakeLists.txt:
cmake_policy(SET CMP0003 NEW) changed from old

The updating of cmake didnt make any difference.
Since its searching for TEveEventManager.h, a root-file. My it not finding it be caused by a
faulty root installation during the installation of the external packages?

Thanks
Sverre

[View Forum Message](#) <> [Reply to Message](#)

Hi all,
we encountered the following error while running make install, after updating the pandaroot
code:

Install the project...
-- Install configuration: "Debug"
CMake Error at base/cmake_install.cmake:42 (FILE):
file INSTALL cannot find file
"/home/susanna/test_install/trunk/buildPanda/lib/libBase.so.0.0.0" to install.

Call Stack (most recent call first):
cmake_install.cmake:37 (INCLUDE)

make: *** [install] Error 1

We use cmake-2.6.
Any suggestion?

Thank you,
Susanna and Lia

[View Forum Message](#) <> [Reply to Message](#)

Hi

Sorry i forgot to mention this in my last submission to the forum and i don't update the
INSTALL file.

You don't need a
make install

anymore. The libraries are copied to the lib directory during the compile and link process. If you
try to install the libraries the system tries to copy a file onto itself.

Ciao

Florian

Subject: Re: cmake error in pandaroot installation
Posted by [Sverre Dørheim](#) on Fri, 14 Nov 2008 10:03:24 GMT
[View Forum Message](#) <> [Reply to Message](#)

I found a solution. It was as follows:

In /fairsoft/tools/root/include there were a broken link to:

/graf3d/eve/inc/TEveEventManager.h

I had to change this to link to ../graf3d/eve/inc/TEveEventManager.h.

In addition i made links to all the other .h files in root/graf3d/eve/inc/

This could be a bug in the external packages install script, or something i've done wrong.

At least now it compiled.

Thanks for all your help

Hi,

These includes are copied or linked if the package is build! it seems that in your system Eve (Root package for event display) was not build during the root compilation this can be due to missing GL libraries. So can you please check in \$ROOTSYS/lib if a shared library libEve.so exist? if not and yyou do not need the event display in pandaroot just take it out from the main CMakeList.txt. Otherwise you have to look in root why it did not build Eve.

regards

Mohammad

[View Forum Message](#) <> [Reply to Message](#)

The shared library libEve.so does not exist. As to finding out why this library did not compile i do not know what to do.

It was installed as a part of the external packages with the configure.sh script.

[View Forum Message](#) <> [Reply to Message](#)

Hi,

The external packages installation call the root configuration with some setting, one of these is the flag to compile Eve, but if root find out that your system does not have GL or GLU libraries it will skip this! and configure without it!

so if you look in \$ROOTSYS/config/Makfile.config in this file there should be something like:

```
BUILDGL      := yes
OPENGLLIBDIR := -L/usr/X11R6/lib
OPENGLLULIB  := -IGLU
OPENGLLIB    := - dylib_file /usr/X11R6/lib/libGL.dylib:/usr/X11R6/lib/libGL.dylib
OPENGLINCDir := $(filter-out /usr/include, /usr/X11/include)
```

(in your case it look different so insted of dylib)

if in the first line no insted of yes or there is no paths to GL and GLU then you know that your

GL installation is not ok or not seen by root!

regards

Mohammad
