Dear all,

I'm working pandaroot v5476.

When I run my analysis script, I encounter following problem.

All simulation and digi and reco procedure have been finished without any serious problem.

In my analysis script, libPndData error was occurred.

What I have to do?

```
root [0]
```

```
Processing My_dvcs_full_ana_true_lhe.C...
```

```
- RTDB container factory FairBaseContFact
```

```
dlopen error: /home/donghee/GSI/buildpanda/lib/libPndData.so: undefined symbol:
```

```
_ZTV12FairTrackPar
```

```
Load Error: Failed to load Dynamic link library
```

```
/home/donghee/GSI/buildpanda/lib/libPndData.so
```

```
(int)(-1)
```

```
*** Interpreter error recovered ***
```

Please use the standard rootlogon.C which stays in gconfig directory. If you copy it in the folder where you execute your macro, the error should vanish.

Thank a lot, I forgot copy rootlogon.C into my working directory.

Now everything is fine!
