Dear All,
While running manual segmentation macro, i've encountered an error that i couldn't sort out. The no. of sectors and pads are shown 'zero' and also the minimum sector size and minimum pad size are shown abnormally large. Attached .tar file contains the error messages and all the relevant macros and classes that i have been using for the purpose. Can any one help me out in fixing the problem?
Thanks in anticipation.

Dear Buddhadeb,

I tested your geometry and segmentation with the TRUNK version of CBMROOT. Stations were segmented without any error. The CbmMuchSegmentManual.cxx file you attached is the old one. Thus, you need to make an update.

With best regards,
Misha.
