
Subject: Status of MC based global pattern reco

Dear colleagues,

we would like to perform some global tracking studies in PANDArOOT, including target and forward spectrometers. I would like to ask: What is the status of the global MC based pattern reco. A few months ago, all detector experts worked on providing PndTrackCand s in their systems for them to be merged to global TrackCands. Has that been achieved yet?

If no, what are the open issues?

If yes, where can we find it and how do we use it. Can it be used in combination with Stefano's global Kalman task?

Cheers, Christian
