
Subject: segmentation fault during digitization (wrong mapper?)

Dear all,

after a successful simulation test, we have tried digitization. We have used "case 17" for the emc geometry and we get segmentation fault when we have particles in the forward direction. We think it is a problem related to the mapper of the forward endcap or shashlyk. We used BoxGenerator and shoot photons in different directions. When we shoot in the backward region(no hits in forward endcap or shashlyk calorimeter) there is no error. When we shoot in the forward region we get the error.

Could anybody take a look to test, and eventually fix, the mapper used by the latest emc geometry?

Thank you very much.

cheers,
manuel

ps. this is an example of the message we get in the log file when problems are found:

Hi Manuel,

I would recommend you to stick to the EMC geometry "case 15" for a while, since at the moment EMC with the latest version of shashlyk calorimeter (case 17) works only at the

simulation stage.

On the one hand there is still no proper digitization for shahlyk implemented and the same digitization as for the rest EMC is used.

I suppose that proper digitization of shashlyk will be implemented in the near future and this error will disappear.

However I will try to look if it's possible to suppress this error with the geometry "case 17".

Best regards,

Dima

Hello everybody,

yes Dima is right there is no proper digitization for shashlyk yet, but I'm working in this direction right now. It will be there soon i believe. For the moment you should not use geom vers 16 and 17 for the full simulation.

Best regards,
Dmitry.

Dear all,

I met the same problem even with case 15. But in addition there is another problem:

```
===== EMC:: ConstructRootGeometry() m4a ===
```

```
=====
```

```
fgeoName3:: /u/dkhanef/programs/trunk/geometry/emc_module4_StraightGeo24.4.root
```

```
File name Bw1= /u/dkhanef/programs/trunk/geometry/emc_module4_StraightGeo24.4.root
```

```
You do not provide a ROOT file
```

Somehow pandaroot isn't able to load backward endcap geometry in case 15 but still can do it in other cases. I checked case 11,12 and 17.

P.S. pandaroot v.8554

Is it just a message, or the detector is completely missing in the simulation?

Sorry, it is just a message.

I suppose that is another "cout" forgotten inside the code...

I looked for cout command and I have found it only in ConstructGeometry() function in PndEmc.cxx. I think that during an introduction of cases 16 and 17 some part of code has been changed. Probably ConstructGeometry() is called somewhere one more time without specifying a name of the detector which cause the message during simulation.

It should really tell you that something going wrong with your geometry but normally it shouldn't print this message.

I have removed forgotten "cout" and fixed issue with wrong message about "You do not provide a ROOT file"

Dmitry
