Subject: Geneva available in PANDA PWA software

Dear PANDA PWA software experts,
the latest HEAD version contains "Geneva" as an external package. I.e. everything related to Geneva should be accessible inside our code. Up to now you can start one Geneva test application by typing:
./GMultiPopulation -c
$CMAKE_SOURCE_DIR/Examples/geneva/GMultiPopulation/GMultiPopulation.cfg

Note: It is now mandatory to install Geneva and to set the environment variable "GENEVA_ROOT" before starting the cmake procedure.

Best regards,
Bertram.
