Dear all,

I just updated the stable branch, since it couldn't build anymore (already for a long time). The stable branch is now identical to the trunk revision 9635). Please note that it is the responsibility of the developers to maintain the "stability" of the /stable branch. Also, the compilation and building of the stable release are nightly reported via the Dashboard. So, please take a look at it once and a while.

Greets,

Johan.

Hi Johan,

Just to point at the issue. The stable branch's base directory was not linked to a fixed revision, hence any update in the base affected the stable directly.
It might be a good idea to fix the stable branch externals for the current one.

Kind regards, Ralf.

good point to discuss for the next meeting

Johan.
