Subject: Detector components colors in GEANT3

Hello,

I'm setting the colors of DIRC components at the geometry construction stage (in the macro which creates the .root geometry file) as "volume->SetLineColor(...)".

But after running the simulation using GEANT3 I see in the eventDisplay totally different colors of my detector from what I set!

Is it possible to make GEANT3 accept my coloring?

In GEANT4 there is no such problem.

Thank you and merry coming Christmas!

If I have understood wekk, Geant3 is sessting colors by itself.
I have tried several times to change colors, but without any effects.

Thank you for the answer.
Yes, that's the problem... or feature.)
