
Subject: New external packages: TH2 COLZ logZ bug

Dear framework-specialists,

as I already tried communicate during the last pandaroot evo meeting, there is a bug in the 5.28 ROOT point release, preventing 2D histograms in "COLZ" mode from being painted with the Logz option (at least with palette 1). This makes the new external packages practically unusable for me.

Could this please be fixed by replacing the root version with the one released yesterday (5.28a, 21.Feb)?

<http://root.cern.ch/drupal/content/root-version-v5-28-00-patch-release-notes>

Cheers

Felix
