Hi,

Do you know about the meaning of "ERROR_SV".
Some of subjobs are marked as ERROR_SV, and resubmit doesn't help to go "finished or completed".

Cheers,
Donghee

Hi,

Here is an overview of all the ERROR messages on the Grid:

http://mlr2.gla.ac.uk/show?page=jobStatus.html

ERROR_SV apparently implies that the job agents did store the data on the storage elements, but that for some reason it was not properly registered (maybe it stands for server validation error or so), hence effectively no data could be stored properly. You should however be able to resubmit it with masterJob <ID> -status ERROR_SV resubmit ?!?

Greets,

Johan

Hi Johan,

I made already few times resubmit via
masterJob <ID> -status ERROR_SV resubmit

But it doesn't help at all. scripts are perfectly OK, because some part of runs can be seen in the output.

Additional problem is that I cannot add any scripts into gridka.
Quote:
info Access [envelope] creation failed: Uploading file for user (dkang) is denied - number of files quota exceeded.

Maybe something is wrong in pandagrid...specially at some storage or disk server.

Best wishes,
Donghee
