Dear stefano,

I have a look the data run935oldnocu and directly compared with run934oldnocu data.
Please find D signal distribution for both data.

And global efficiency in the psi final sample is increased from 3.8% to 5.757%. That's significantly improved.

I think that the material effect is not so serious, but I couldn't test in geometry level in detail.

Best regards,
Donghee
