

Hi

I tried several times now to compile the recent external-packages, checked out from repository, release/jan12

After an hour or so of compiling i get the error message attached below, obviously there is a problem building the VGM package. (or maybe already building Geant4 ??)

Any idea ?

I checked the prerequisites, but they look fine.

Any idea what is going wrong here ???

Thanks for any help
best regards,

Christian

I tried the older versions now,
both Feb11 and May11 compile without problems.
The problem only occurs with the latest release.

Noone any ideas ?

I found the problem:

There is a bug in the cmake-script in

fairsoft/transport/vgm/cmake/FindGeant4.cmake

in line 17,

it must be: \${GEANT4_DIR}/bin

instead of: \$GEANT4_DIR/bin

The file is unpacked only during installation from
fairsoft/transport/vgm_cmake.tar.gz

After changing that it compiles without further problems.

Hi Christian,

thanks for reporting the problem. I found the same problem and solution yesterday and fix it already. The newest version from the repository should work now without problems.

Ciao

Florian
