I have successfully installed the external packages may11, but with cbmroot i am facing the problem with "make" command.

Given below, is the output:

I am here.

```
-- Found Subversion: /usr/bin/svn (found version "1.6.12")
-- FairRoot Revision - 15470 Branch - https://subversion.gsi.de/fairroot/cbmroot/trunk
[ 0%] Built target svnheader
[ 0%] Built target FairTools
[ 4%] Built target Base
[ 4%] Building CXX object dbase/CMakeFiles/FairDB.dir/dbUtils/FairTSQLObject.o
/home/abhi/Downloads/cbmroot/dbase/dbUtils/FairTSQLObject.cxx: In member function
'TDictionary& FairTSQLObject::GetcurDict()':
/home/abhi/Downloads/cbmroot/dbase/dbUtils/FairTSQLObject.cxx:78: error:
'GetDictionary' is not a member of 'TDictionary'
make[2]: *** [dbase/CMakeFiles/FairDB.dir/dbUtils/FairTSQLObject.o] Error 1
make[1]: *** [dbase/CMakeFiles/FairDB.dir/all] Error 2
make: *** [all] Error 2
```

I am using ubuntu 10.10.

Someone please get me out of it.

PS: I'm not sure if this is the right place to post this problem. Please correct me if i am wrong.

Hi,

the newest trunk version of cbmroot works only with the newest version of the external packages (fairsoft release jan12).

So you have to install this version of the external packages and then everything should compile.

Ciao

Florian

Thank you very much for the reply.
I would ask if there is anything i can do to make it work with this package, like get a previous version of trunk or something else. Because i have already tried twice to install Jan12 packages but they gave some errors which i was unable to get past. That is why i tried out the may11 package. At present i do not have the record about what those errors were. So please tell me if i absolutely need to install the jan12 packages.

Thanks in advance

Hi,

you need the new jan12 release. The compilation error in cbmroot is due to new Root functionality which is only present in jan12.

Ciao

Florian

Hi,
Thank you for your support Florian.
