Dear all,

is it possible to get from TCandidate an access to different variables (e.g. EMC dE/dx, MVD dE/dx, etc) which are available for PndPidCandidate?

Cheers,
Dmitry

Try with GetMicroCandidate(), it should give you back an object VAbsMicroCandidate. I don't know if all the variables are implemented there, if something is missing just tell me and I will fix it.

TCandList p1;

```
...  
if((p1[ii].GetMicroCandidate().GetSttHits())==0){  
...  
}
```
