Dear all,
I tried to install external packages on PC with fresh fedora OS and got following error during root compilation:

make: bin/rmkdepend: Command not found

Does somebody have any idea how to resolve it?
To provide more information I attached log file.

Anastasia.

Well, after studying this problem with Google, I decided to change root version in external packages to version 5.34.05. And it worked.

Cheers,
Anastasia.

Hi,
from the roottalk it seems that with a "make distclean" and after a recompilation this works again. Have you tried?

Hi!
Yes, I tried it as well. Didn't work for me.

However soon we will have a new release of the external packages, with also the new root.

Will it be ROOT 6 or current ROOT 5/3* version?
