Dear all,

I have updated the eventdisplay macro in macro/run to show a wider variety of detectors as points or hits and also tracking information.

Please feel free to use it and send your comments.

Cheers,

Tobias

Dear Tobias,

from my point of view in the eventDisplay.C script:

```
FairMCPointDraw *EMCPoints = new FairMCPointDraw ("EmcHit",kOrange, kFullSquare);
```

needs to be replaced by

```
FairHitPointSetDraw *EMCPoints = new FairHitPointSetDraw ("EmcHit",kOrange,  
kFullSquare);
```

Otherwise, all the shown EmcHits are located at the origin, as an effect of bad casting.

Cheers,
Philipp
